- **Behavioral Segments – The Secret Sauce of Analytics**

When analyzing user behavior, time is of the essence. We need to look at behavior as a series of user actions over time, starting from their very first online action to the present. Past user behavior reveals patterns that can provide great insights on the present (and even shed light on future predictions, but that's a post for another time).

- **Web Analytics Deliver Great Customer Experiences Thanks to Segmentation**

If you want to analyse how people interact with your website content, there is a high chance that you won't be looking at the bigger picture. On the contrary, value comes from looking at the details. Visitors come to a website from multiple channels, for various reasons, so it makes sense to group similar people together to analyse their behaviour.

- **Understanding Your Visitors With Segments**

Your website is made up of unique groups of people. That might be a group of people who use certain devices, people who are looking for a specific type of information, people who visit from a certain source, people from a certain geographic region, or more. To really know how to improve your website, you want to view data about each group separate from the data about other groups.
